

Fig. S1. Paraffin-embedded tissue samples from patients with invasive extramammary Paget's disease (EMPD) (a, b) were stained with anti Foxp3 Ab and anti CD39 Ab. The sections were developed with new fuchsin for Foxp3 (red) and with 3,3-diaminobenzidine tetrahydrochloride for CD39 (brown) (original magnification (a) $\times 100$, (b) $\times 400$).
