

Table SII. Bone marrow findings in 71 cases with cutaneous myeloid sarcoma

Diagnosis	Cases, n
Acute myeloid leukemia (AML) with minimal differentiation (FAB: M0)	4
AML without maturation (FAB: M1)	4
AML with maturation (FAB: M2)	6
Acute myelomonocytic leukemia (FAB: M4)	15
Acute monocytic/ monoblastic leukemia (FAB: M5a/b)	13
Acute megakaryoblastic leukemia (FAB: M7)	1
AML, unclassifiable ^a	6
AML, myelodysplasia-related ^b	3
Biphenotypic acute leukemia (B-myeloid)	1
Chronic myelogenous leukemia	1
Chronic myelomonocytic leukemia ^c	5
Myelodysplastic syndrome ^d	4
Juvenile myelomonocytic leukemia	1
No evidence of malignancy	7

^aNot classified due to lack of enzyme cytochemical analysis of blasts. ^bIncludes 2 cases of myelodysplastic syndrome which ultimately progressed to AML and 1 case presenting *de novo* with multilineage dysplasia. ^cIncludes 2 cases which progressed to AML. ^dAll cases presented with increased bone marrow blasts; 1 represented a therapy-related myelodysplastic syndrome.
