

Fig. S3. Levels of the chemokine CCL20 in cell culture supernatant from lipopolysaccharide (LPS)-activated (a) or anti-CD3- and anti-CD28-activated (b) peripheral blood mononuclear cells from patients with psoriasis before (Psoriasis 0 wks) and 12 weeks after narrowband ultraviolet B (UVB) therapy (Psoriasis 12 wks) and from their matched, healthy controls. The line shows the median, $n = 10$.
