

Fig. S1. (a) Histopathology of lesion on the right eyelid (haematoxylin and eosin (H&E)). Immunohistochemical examination reveals (b) CD3<sup>+</sup>, (e) CD2<sup>+</sup>, (c) CD5<sup>+</sup>, and (d) CD8<sup>+</sup> T cells assembled in the dermis. Original magnification: (a, b)  $\times 40$ ; (c–f)  $\times 100$ .
