

Fig. S1. CD4, CD8, TIA-1 and CD68 in peritumoural area of keratoacanthoma (KA) and squamous cell carcinoma (SCC). Paraffin-embedded tissue samples from patients with (A, C, E, G) KA and (B, D, F, H) SCC were deparaffinized and stained with (A, B) anti-CD4 Ab, (C, D) anti-CD8 Ab, (E, F) anti-TIA-1 Ab, or (G, H) anti-CD68 Ab. Sections were developed with 3,3'-diaminobenzidine tetrahydrochloride. (Original magnification (A–D) $\times 100$, (E–H) $\times 200$) (KA: $n=10$, SCC: $n=18$).
