

Appendix S2

ACKNOWLEDGEMENTS

We thank Eric Legius for fruitful comments. Miso Immonen is acknowledged for the valuable help with the patient samples, Paula Pennanen for the help with methodology and Linda Nissi for the help with confirmation of the found mutations. The computing resources used in the data analysis were provided by CSC – IT Center for Science, Espoo, Finland. The Sanger sequencing was done by DNA Sequencing Service of Turku Centre for Biotechnology. The Sequencing Initiative Suomi The SISu project is an international collaboration between research groups aiming to build tools for genomic medicine. These groups are generating whole genome and whole exome sequence data from Finnish samples and provide data resources for the research community. Key groups of the project are from UCLA, Michigan University, The Broad Institute of MIT and Harvard, Oxford University, The Wellcome Trust Sanger Institute, Lund University, University of Helsinki, University of Eastern Finland and The Institute of Health and Welfare, Finland.
