

Expression of β_2 -integrins on granulocytes

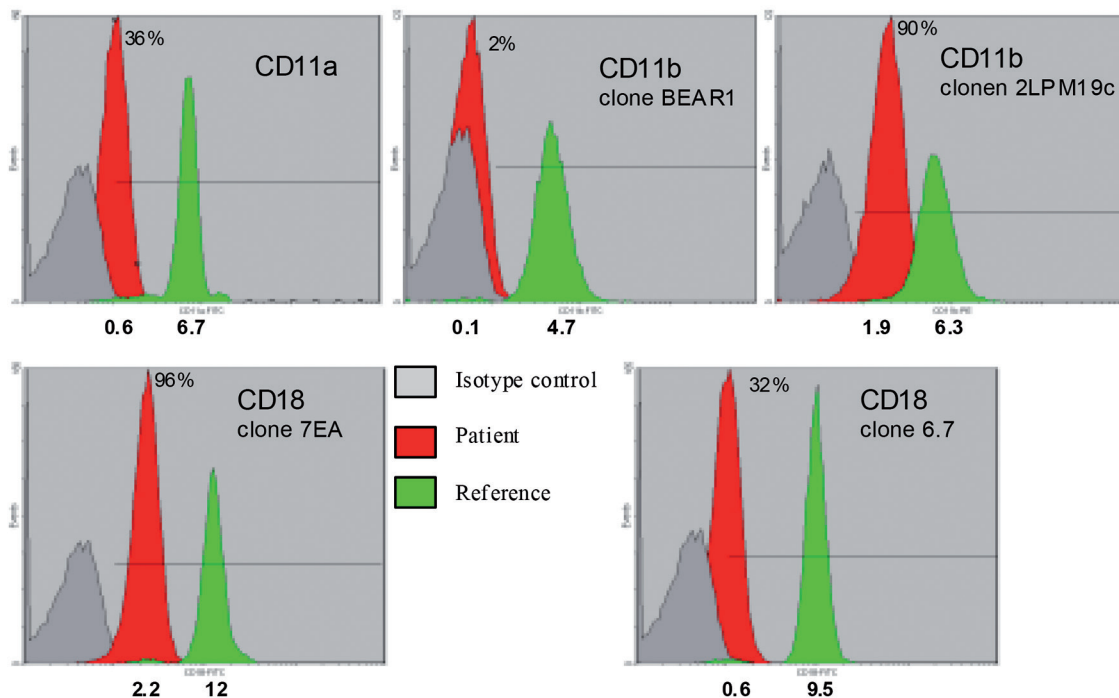

Fig. S2. Cell surface expression of β_2 -integrins on granulocytes from the patient and a healthy individual analysed by flow cytometry. The relative number (%) of granulocytes from the patient with an expression above background (isotype control) and the mean fluorescence intensity of the granulocyte population of the patient and reference are depicted. The horizontal line indicates expression above background. Analysis performed in January 2008. For details see Appendix S1¹.
