

Table SI. Histological features of classical mycosis fungoides, T-cell pseudolymphoma and of the case presented

Feature	Mycosis fungoides	T-cell pseudolymphoma	Presented case
Pattern	Band-like	Band-like	Band-like
Exocytosis	Prominent	Variable, but mild	Mild
Pautrier microabscesses	Present	Variable, but rare	None
Cellular atypia of lymphocytes	Large lymphocytes, cerebriform nuclei	Variable, but mild	None, small uniform cells
T lymphocytes	CD3 <sup>+</sup> , CD4 <sup>+</sup> , CD8 <sup>-</sup>	CD3 <sup>+</sup> , CD4 <sup>+</sup> , CD8 <sup>-</sup>	CD3 <sup>+</sup> , CD4 <sup>+</sup> , CD8 <sup>-</sup>
CD20 <sup>+</sup> /CD79 <sup>+</sup> B-lymphocytes	Very few	Few (<30%)	Many
T-cell clonality	Monoclonality	Variable, majority shows polyclonality	Monoclonality, rearrangement γ-TCR
Papillary fibrosis	Present	Missing or moderate	Mild
Psoriasiform hyperplasia	Present	Missing or moderate	None
