

Fig. S1. The proportions of positive reactions (%) to the textile dye mix (TDM) either at 6.6% or 8.0% w/w (pet.) or both and separated for the 2 concentrations of the mix, and to the TDM in the patients solely reacting to the mix but not to p-phenylenediamine and/or black rubber mix. The number of patch-tested patients at each clinic is seen in the brackets.
