

Table SII. *Histomorphological classification of erythroderma*

Histological score	Eczema		Psoriasis		Drug		CTCL		Other		= Typical finding in			
	0–1	≥ 1.5	0–1	≥ 1.5	0–1	≥ 1.5	0–1	≥ 1.5	0–1	≥ 1.5	Eczema	Pso	Drug	CTCL
Keratosis (hyperparakeratosis)	3	8	2	10	6	3	5	3	3	3				
Hypogranulosis	5	6	4	8	6	3	3	5	3	3				
Acanthosis	1	10	1	11	5	4	2	6	1	5				
Spongiosis	2	9	7	5	5	4	4	4	1	5				
Hydropic degeneration	11	0	12	0	3	6	4	4	4	2				
"Lining"	11	0	12	0	9	0	2	6	6	0				
Microabscess (lymphocytes)	11	0	12	0	9	0	6	2	6	0				
Neutrophils (epidermis)	6	5	5	7	7	2	7	1	4	2				
Pear-like acanthosis	7	4	2	10	6	3	6	2	5	1				
Expanded rete ridges	6	5	2	10	8	1	5	3	3	3				
Eosinophils (dermis)	6	5	9	3	3	6	2	6	5	1				
Neutrophils (dermis)	11	0	7	5	8	1	7	1	6	0				

Histomorphological classification of eczema, psoriasis, drug reactions and cutaneous T-cell lymphoma by means of histological criteria on the basis of a score ranging from weak (=0) to strong (=3). The number of specimens with complete absence or only weak expression (0–1) is given, in comparison with specimens with definite presence of histological feature (≥ 1.5), respectively. If the feature was present in ≥ 2/3 of samples, it was regarded as "typical" (black boxes), if it was found in ≤ 1/3 as "untypical" (white boxes). Grey boxes indicate frequencies between 1/3 and 2/3.

CTCL: cutaneous T-cell lymphoma; Drug: drug reaction.
