| Yes | 53 (42.7) |
| 1 previous skin cancer | 18 (14.5) |
| $>1$ previous skin cancer | 32 (25.8) |
| No | 71 (57.3) |

${ }^{a}$ The size of the largest tumour was documented in each participant. ${ }^{\mathrm{b}}$ Five participants were diagnosed with a squamous cell carcinoma (SCC), 2 with a collision of basal cell carcinoma (BCC) and SCC, 2 with Bowen's disease 4 with actinic keratosis, 4 with solar elastosis, one with seborrheic keratosis and one with a histiocytoma as second tumour in addition to their BCC. Percentages do not always total $100 \%$ because of rounding.
