

Fig. S1. No correlation of ultraviolet (UV)-induced basement membrane (BM) damage/dermal changes with cadherin11 (CDH11) expression. Western blot analysis of each specified protein expression and graphs of CDH11 in: (A) fibroblasts and (B) keratinocytes irradiated with a wide range of narrow band-ultraviolet B (NB-UVB) intensities. β-actin was used as an internal standard. Data represent the mean ± SD of 5 independent experiments (* $p < 0.05$).
