

*Fig. S1.* Effect of cyclosporine A (CsA) treatment on keratin-14 and keratin-10 expression in lesional skin. The figure shows immunolabelling with (a) keratin-14 and (b) keratin-10 expression in the lesional skin of the 3 groups after CsA treatment course. Abnormal expressions of keratin-14 and keratin-10 in the epidermis of Dfb-NC/Nga mice were normalized in the CsA-treated group, especially 5 mg/kg CsA. *White and broken lines* indicate the skin surface and the border between the epidermis and dermis (basement membrane), respectively. *Scale bars*=150 μm.
