

Fig. S1. Schematic distribution of 132 patients in relation to autosomal recessive congenital ichthyosis (ARCI) subtype and severity scores for ichthyosis and erythema. The size and position of the circles (or ellipses) approximately reflect the number of patients and mean score values in each subgroup; 90% score ranges are indicated. HI: harlequin ichthyosis; LI: lamellar ichthyosis; CIE: congenital ichthyosiform erythroderma; PI: pleomorphic ichthyosis.
