

Fig. S1. Charts showing percentages of the outcome scores in relation to the demographic data. (a) Outcome scores for appearance concern (DAS-24); (b) for anxiety (HADS-anxiety); (c) for depression (HADS-depression) and (d) quality of life (QoL) (DLQI) (A: age; B: age of onset; C: occupation; D: partner occupation; E: family status; F: ethnicity. "Moderate effect or more" equates to those who would meet criteria for clinical concern with clinical practice.). DAS: Derriford Appearance Scale; HADS: Hospital Anxiety and Depression Scale; DLQI: Dermatology Quality of Life Index.
