

Fig. S1. Expression of lymphocyte markers by quantitative real-time PCR (qRT-PCR) in basal cell carcinoma (BCC) tumours (T), peritumoural skin (P) and buttock skin (B). Tumour necrosis factor alpha (TNF-α), RORc, IL12 and granzyme-B were increased in BCC and peritumoural skin compared with buttock skin, Interferon gamma (IFN-γ) was increased in BCC and transforming growth factor (TGF)-β and perforin were increased in peritumoural skin.
