

**Fig. S1. CD93 gene expression in lesional and non-lesional skin from patients with psoriasis before (pre) and after (post) narrow-band ultraviolet B (NB-UVB) treatment** ( $n = 19$ , • mean, box = mean  $\pm$  0.95 conf. interval, whiskers = mean  $\pm$  standard deviation (SD)). No statistically significant differences between groups before and after NB-UVB  $p = 0.099$  (lesional) and  $p = 0.227$  (non-lesional).
