Fig. S1. Illustration of how the final sample size of 23 patients with atopic dermatitis (AD) was obtained. Healthy controls were taken out of a pool in such a way that age and order of video presentations were stratified between groups.

42 AD-patients were shown 3 videos

- Exclusion of 17 patients due to:
  - not fulfilling the inclusion criteria (high potent medication; n = 6)
  - order of video presentation (EV-EV-CV; n = 11)

25 AD-patients

- Exclusion of 2 patients by chance in order to have comparable groups regarding the order of video presentation

23 AD-patients in the final sample
