

**Table SII. Examples of discrete choice scenarios**

Please choose the option you personally prefer.

*Group 1*

<b>Time until response</b>	2 weeks	8 weeks
Probability of <b>severe adverse events</b> (e.g. severe infections, severe intolerance reactions, liver damage, kidney damage)	<1%	2–5%
<b>Treatment location</b>	At a physician's office	At home supported by a medically trained person
Probability of <b>PASI 90</b> response (psoriasis reduced by 90%)	20–40%	40–60%
<b>Cost</b> to the healthcare system per <b>year</b>	1,000–2,000€	15,000–25,000€

*Group 2*

Frequency of <b>laboratory tests</b>	Initially every 12 weeks	Not routinely required
<b>Delivery method</b>	Subcutaneous injections with a syringe	Tablets
Treatment frequency	Daily	Every 4–8 weeks
<b>Cost</b> to the healthcare system per <b>year</b>	1.000–2.000€	5.000–10.000€
Probability of <b>PASI 75</b> response (psoriasis reduced by 75%)	80–90%	40–60%
Probability of <b>mild adverse events</b> (e.g. mild infections, headache, gastrointestinal discomfort, temporary, mild abnormalities of laboratory parameters)	50–70%	10–30%
