**Supplementary material to article by X. Wang et al. “Ten-eleven Translocation-2 Regulates DNA Hydroxymethylation Status and Psoriasiform Dermatitis Progression”**

**Fig. S3. TET2 regulated Th17 cell differentiation in the spleen.** (A, B) The proportion of Th17 cells in the splenocyte CD4+ T cells was analysed by labelling cells with anti-CD4 and anti-IL-17A antibodies. A representative graph is shown. The results are shown as the mean ± standard deviation (SD). *p < 0.05, **p < 0.01 and ***p < 0.001, compared with the mice in the imiquimod group. The data represent the mean of 3 independent experiments, each performed in triplicate.
