Supplementary material to article by E. Gardette et al. “Livedoid Vasculopathy: A French Observational Study Including Therapeutic Options”

Fig. S3. Treatment algorithm for the management of livedoid vasculopathy relapses.

Further flares:
Restart the most efficient treatment used for previous flare

Systematically recommend smoking cessation and compression stockings

> 1 flare/year despite antiplatelet maintenance therapy
Switch for maintenance therapy based on VKA or rivaroxaban

Frequent flares (rythm <6months) despite anticoagulant maintenance treatment:
IVIG+ rivaroxaban
