

Table SI. Clinical-pathological features of study population

Feature	
Normal epithelium, <i>n</i>	21
Squamous cell carcinoma, <i>n</i>	21
Usual type	15
Verrucous	3
Sarcomatoid	2
Mixed (with sebaceous areas)	1
with associated squamous cell hyperplasia	7
with associated lichen sclerosus	12
with associated differentiated penile intraepithelial neoplasia	2
Age, years, median (range)	70 (52–87)
T, <i>n</i> (%)	
Tis	2 (9.5)
T1a	5 (23.8)
T2	7 (33.3)
T3	7 (33.3)
Grade, <i>n</i> (%)	
1	7 (33.3)
2	5 (23.8)
3	9 (42.9)
Loco-regional lymph node status, <i>n</i> (%)	
Negative	1 (4.8)
Positive	1 (4.8)
Unknown node status (no lymphadenectomy)	19 (90.5)
