

**Fig. S1. Demonstration of** (a) CD25<sup>+</sup> immunoreactive cells (40× objective), (b) FoxP3<sup>+</sup> immunoreactive cells (20× objective), and (c) apparent morphological contacts between tryptase<sup>+</sup> mast cells and FoxP3<sup>+</sup> cells (63× objective) in a Köbner-negative skin biopsy taken at day 7 after the tape-stripping. In (c) one tryptase<sup>+</sup> cell (*violet*) is in apparent morphological contact (*arrow*) with a FoxP3<sup>+</sup> cell (*black*).
