Fig. S2. Quantitative real-time PCR comparisons of selected pruritogenic mediators in lesional skin from atopic and non-atopic prurigo nodularis (PN) patients are shown. (a–c) Nerve growth factor (NGF) axis, (d–f) interleukin (IL)-31 axis, (g–i) thymic stromal lymphopoietin (TSLP) axis, and (j–n) endothelin (ET) axis. Values show log2 expression/ACTB and are presented as the means ± SEMs. Mann-Whitney U test was used to compare differences in expression between atopic and non-atopic lesions.
