

Information on Acta Dermato-Venereologica

ANDERS VAHLQUIST

Professor of Dermatology and Venereology, Uppsala University, Uppsala, Sweden, and Editor-in-Chief of Acta Dermato-Venereologica. E-mail: anders.vahlquist@medsci.uu.se

Acta Dermato-Venereologica has increased its Impact Factor to 2.456! Anders Vahlquist who is the Editor-in-Chief of Acta Dermato-Venereologica gives below some comments on the development of Acta Dermato-Venereologica and also informs about the impact factor figures for the other top journals in dermatology.

Institute for Scientific Information (ISI) statistics in June 2009 show, very encouragingly, that the impact factor of Acta Dermato-Venereologica for 2008 has risen to 2.456 and that, as a consequence, our journal is now ranked among the top nine dermatological journals in the world. The increase in impact factor (see Fig. 1 for a yearly comparison and Table I for a list of the 15 highest ranking journals) has been paralleled by a steady increase in submissions to Acta Dermato-Venereologica, from 309 papers in 2007 to a projected 425 papers in 2009. I regard both these changes as a sign of appreciation from our readers and contributors. This positive development could not have taken place had it not been for the dedicated work of the editorial office, lead by Mrs Andersson, and by all Section Editors, Advisory Board members and peer reviewers who have so generously and wholeheartedly supported the journal over the years.

Another factor contributing to the success story of Acta Dermato-Venereologica is our close collaboration with two research societies, the International Forum for the Study of Itch (IFSI) and the European Society for Dermatology and Psychiatry (ESDaP), for which Acta Dermato-Venereologica is the official journal. As a result, a series of high impact papers on itch and psychodermatology have been published recently. We look forward to continued and enlarged collaborations with both of these societies.

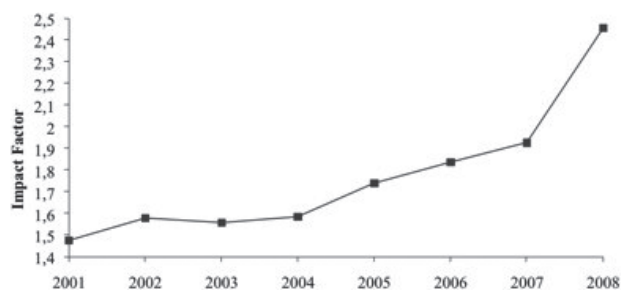

Table I. Impact factor 2008 for the 15 top-most journals in dermatology

Journal	Impact Factor
J Invest Dermatol	5.251
Pigm Cell Melanoma Res	4.634
J Am Acad Dermatol	4.081
Br J Dermatol	3.489
Contact Dermatitis	3.470
Arch Dermatol	3.402
Exp Dermatol	3.259
J Dematol Sci	2.973
Acta Derm Venereol	2.456
Skin Pharmacol Phys	2.388
Clin Dermatol	2.377
Melanoma Res	2.336
J Eur Acad Dermatol	2.276
Dermatology	2.227
Wound Repair Regent	2.152
Dermatol Surg	2.102

Acta Dermato-Venereologica is not just a scientific journal but also an educational forum. Browsing the journal for interesting clinical case reports is one way of learning more about our specialty. To further stimulate self-assessment in diagnostic skills in dermatology and venereology, the editorial board has launched a Quiz section, starting from issue No. 3 of the present volume. Some of the contributions in this section will be developed from case reports submitted to the journal for publication, which are of good quality, but lack originality. Others may be submitted as original Quiz cases, as set out in the updated instructions for authors. In addition, Quiz papers are assigned a DOI number and can thus be searched in PubMed in the same way as regular papers appearing in the journal.

I take this opportunity to thank the members of the Nordic Societies for continuously supporting Acta Dermato-Venereologica by being group subscriber of Forum for Nordic Dermato-Venereology and Acta Dermato-Venereologica and by sending papers to and peer reviewing other author's papers submitted to Acta Dermato-Venereologica. The high impact factor and quiz section will hopefully attract even more submissions from the Nordic countries.
