Table SII. Timing of sexual rehabilitation following stroke: priorities and consensus

Timing	Consensus score (IQR/2)	Interpretation	Priority based on percentage of responders identifying the timing in their top 3		Priority based on mean priority scores (1–5)	
			Responders selecting topic in their top 10 (%)	Interpretation	Mean	Interpretation
Within the first 2 weeks following stroke	0.6	High	10.6	Low	2.4	Low
1 month after the initial diagnosis of stroke	1	Moderate	35.1	High	3.2	High
3 months after the initial diagnosis of stroke	0.5	High	54.3	High	3.8	High
6 months after the initial diagnosis of stroke	0.5	High	55.3	High	4.2	High
1 year after the initial diagnosis of stroke	0.5	High	42.6	High	4.3	High
>1 year after the initial diagnosis of stroke	0.5	High	22.3	Intermediate	4.3	High
