

Table S1. Characteristics of patients with *Helicobacter cinaedi* bacteraemia accompanied by skin lesions

Case No.	Age	Sex	Underlying disease	Blood culture ( <i>H. cinaedi</i> )	Fever	Diarrhoea	Location of skin lesions	Erythemas n	Size range of erythema cm	Eruption	Pain	Treatment	Recurrence
1	63	M	Chronic renal failure	Positive	+	-	Arms, legs	5	3-8	Dark-red erythemas	+	Clarithromycin, cefdinir, amoxicillin	None
2	79	M	Lung cancer	Positive	+	+	Arms, legs	12	3-7	Violaceous erythemas	-	Amoxicillin, meropenem	None
3	62	M	Lung cancer	Positive	+	-	Legs	3	6-10	Infiltrated erythematous plaques	+	Ampicillin/subactam	None
4	56	F	Lymphoma	Positive	+	-	Legs	2	5-7	Reddish-to-violaceous erythema	+	Amoxicillin, cefepime, ampicillin/subactam	> 4 times
5	68	F	Chronic renal failure, Sjögren syndrome	Positive	+	-	Arms, legs	4	5-10	Diffuse dark erythema	+	Ceftazidime, fosfomycin	1 time
6	37	F	Lymphoma	Positive	+	+	Left leg	2	5-7	Erythema	+	Amoxicillin, cefepime	2 times
7	71	M	Autoimmune haemolytic anaemia	Positive	+	-	Thighs	2	12-14	Erythema	+	Amoxicillin, ampicillin/subactam	3 times
8	57	F	Lymphoma	Positive	+	-	Left arm, left leg	2	ND	Pink-red infiltrated erythematous plaques	+	Cephazolin, panipenem	None
9	64	F	Lymphoma	Positive	+	-	Legs	6	2-3	Pink-red infiltrated erythema	+	Amoxicillin, levofloxacin	3 times

ND: not described.
