

Table SIII. Results of patch-tests and information concerning atopic dermatitis (AD) and deodorant sensitivity in the 8 participants with contact allergy to aluminium

Sex	Age, years	Group	Patch-test to aluminium								AD	Deodorant sensitivity
			2.0% <sup>c</sup>		10.0% <sup>c</sup>		20.0% <sup>c</sup>	Finn Chamber				
			Day 3	Day 7	Day 3	Day 7	Day 4 <sup>a</sup>	Day 3	Day 7			
<i>Exposed</i>												
F	18	1	+	+	++	++	NT <sup>b</sup>	-	-	Yes	No	
F	16	1	-	-	+	(+)	NT	-	-	Yes	No	
M	12	3	(+)	+	(+)	+	+	-	-	Yes	No	
M	9	2	-	(+)	-	+	NT	-	-	Yes	No	
<i>Unexposed</i>												
F	15	0	(+)	-	(+)	+	+	-	-	No	No	
F	13	0	+	+	++	+	NT	-	-	Yes	No	
F	31	0	+	-	-	-	-	-	-	No	Yes	
F	27	0	+	+	++	++	NT	-	-	Yes	Yes	

<sup>a</sup>If the result from the reading on day 3 was questionable a retest was conducted with 20.0% aluminium chloride hexahydrate in petrolatum on the same day and read only once, i.e. on day 4. <sup>b</sup>Not tested. <sup>c</sup>Aluminium chloride hexahydrate in petrolatum.

(+): doubtful patch-test reaction; +, ++: positive patch-test reactions with an allergic morphology; -: negative patch-test reaction.
