Supplementary material to article by O. Norisugi et al. "In vitro Cytokine Expression by Peripheral Mononuclear Cells in Herbal Drug-induced Skin Eruption"

Fig. S2. Cell viability in the presence of senna. Peripheral mononuclear cells (1×10⁶) from patient 2 with senna-induced skin eruption or healthy control were cultured with the supernatant from senna at various concentrations for 24 h and cell viability was assessed. Data are presented as means ± standard deviations (SD) (n=5).
