Supplementary material to article by F. Le Loarer et al. “Primary Cutaneous CD8+ T-cell Lymphoma Masquerading as Acral Vascular Syndrome”

Fig. S1. Cutaneous lymphoma masquerading as acral syndrome. Histopathology findings. Histologic features were identical on all biopsy, highlighting a lymphomatous infiltrate within deep dermis composed of pleomorphic cells with focal features of angiodestruction (a–c, Haematoxylin eosin safran, × 100, × 300, × 400, respectively).
