Fig. S1. Schedule of main population analyses and sub-group populations excluding patients with complete lymph node dissection (CLND) or with nodal radiation therapy, respectively.

- Total population ($n = 108$)  
  First set of analyses (Table II)  
  - Patients with regional irradiation excluded ($n = 28$)  

- Patients without regional irradiation ($n = 80$)  
  Second set of analyses (Table III)  
  - Patients with CLND excluded ($n = 33$)  

- Patients without CLND ($n = 75$)  
  Second set of analyses
