Fig. S1. Flow cytometry (FCM) of raw melanoma. (a) The percentages of immunoreactive melanoma cells are shown. (b) The histograms compare the abundance of cells detected with CD271-FITC (white) vs. mouse isotype-IgG (grey). (c) The histograms compare the results for ARID3B (white) vs. IgG isotype (grey). Each histogram shows the ARID3B/CD271 positivity of raw melanoma cells.
