

Table SI. Demographic, clinical, and laboratory characteristics of study participants

Characteristics	Controls (n = 101)	Inflammatory dermatoses (n = 21)	Mycosis fungoides (n = 20)	p-value*
Age, years, mean (range)	56 (24–82)	51 (45–47)	56 (18–80)	0.326
Male/female, n (%)	77/24 (76/24)	12/9 (57/43)	15/5 (75/25)	0.195
Systemic treatment, n (%)		13 (65)	7 (41)	0.132
Acitretin	–	4	5	
Interferon alpha	–	–	1	
Extracorporeal photopheresis	–	–	1	
Methotrexate	–	3	1	
Cyclosporine	–	7	–	
Prednisone	–	2	–	
Biological therapy	–	4	–	
Phototherapy, n (%)	–	8	14	0.071
Monocytes, %, mean±SD	28±12	30±15	36±17	0.059
Lymphocytes, %, mean±SD	51±25	56±25	55±21	0.768

*Unstandardized p-value (univariate analysis).

SD: standard deviation.
