Supplementary material to article by T. Talme et al. “Transient Elastography May Improve Detection of Liver Fibrosis in Psoriasis Patients Treated with Methotrexate”

Patients recruited
\( n = 228 \)

No TE value
\( n = 5 \)

Unsuccessful TE
\( n = 22 \)

Patients analyzed
\( n = 201 \)

Patients receiving methotrexate ≤ 24 months
\( n = 47 \)

Patients receiving methotrexate > 24 months
\( n = 122 \)

Biologics
No methotrexate
\( n = 32 \)

Fig. S1. Algorithm of patient selection and transient elastography (TE) trial.
