

Table SII. Eleven cases with café au lait macules (CALM) lesions both with and without the halo phenomenon

Registered case	Mean luminance of all CALMs	
	Haloed phenomenon (overlapping numbers)	Non-haloed phenomenon (overlapping numbers)
F1	111.3 (5)	95.9 (4)
F5	107.1 (2)	88.4 (1)
F6	128.4 (5)	130.9 (3)
F8	85.3 (3)	73.2 (6)
F12	59.5 (3)	52.7 (3)
T3	94.3 (8)	83.7 (2)
T4	72.2 (2)	71.1 (2)
T5	72 (3)	81.2 (1)
T7	111.3 (2)	95.1 (4)
T9	124.3 (2)	91.6 (3)
T11	191.5 (1)	168 (1)

Although 9 out of 11 cases had a higher mean luminance in café au lait macules (CALMs) with haloes compared with those without haloes, there was no statistically significant difference between the 2 types ($p=0.44$).
