

Table S1. GPR132 expression in control and oral lichen planus (OLP) samples

Biopsy sample	Healthy controls Mean ± SD	OLP patients Mean ± SD	<i>p</i> -value
Epithelium	4.39 ± 0.05 (<i>n</i> = 7)	4.49 ± 0.16 (<i>n</i> = 7)	0.18
Epithelium + connective tissue	4.42 ± 0.06 (<i>n</i> = 7)	4.98 ± 0.68 (<i>n</i> = 8)	0.054

Data are taken from raw data of (12) and are mean ± standard deviation (SD) values for the background normalized (neqc) data for Illumina probe ID ILMN_1811171. *p*-values are for 2-tailed Welch's *t*-tests. The corresponding *p*-values for 2-tailed Mann-Whitney tests were epithelium, 0.62; epithelium + connective tissue, 0.12.
