

**Fig. S1. Histopathological images from case presentation 2 biopsy in June 2011.** Haematoxylin and eosin (H&E) staining at (A) 4× and (B) 10× magnification. (C) Immunohistochemistry staining for CD3. Infiltrate was comprised of 60% CD3<sup>+</sup> T lymphocytes (70% CD4<sup>+</sup>, 30% CD8<sup>+</sup>). (D) Immunohistochemistry staining for CD20. Infiltrate was comprised of 40% CD20<sup>+</sup> lymphocytes. Biopsy was read as a non-specific lymphohistiocytic infiltrate with an important B-cell component.
