

**Fig. S2. Galectin-9 does not correlate with counts of various blood populations.** Gal-9 levels do not correlate with number of circulating (a) lymphocytes, (b) thrombocytes, (c) leukocytes, (d) immature granulocytes, (e) neutrophils or (f) basophils. *Line* represents regression line, *grey shading* illustrates 95% confidence interval (95% CI), Spearman's correlation test;  $n = 40$  patients with bullous pemphigoid (BP).
