

Fig. S1. Association between tumour size, width and depth of surgical margins and histological tumour extension. (a, b) Comparison of the macroscopically visible tumour size (maximum tumour diameter) and the maximum depth of excision (a) and the maximum histological tumour extension (b). *p*-value refers to Mann-Whitney *U* test. (c) Spearman correlation between lateral margin width and macroscopically visible tumour size (maximum tumour diameter). Tumours with previous incomplete resection ($n=13$) were excluded from the analysis. The total number of analysed tumours was 35.
