Efficacy and Safety of Oral Administration of a Mixture of Probiotic Strains in Patients with Psoriasis: A Randomized Controlled Clinical Trial. Acta Derm Venereol 2019; 99: 1078–1084 sentences in the Abstract, Results as well as in Figure legend for Fig. 2 are incorrect. The changes are given in bold in the following sentences:

Abstract:
At 12-week follow-up, 66.7% of patients in the probiotic group and 41.9% in the placebo group showed a reduction in Psoriasis Area and Severity Index of up to 75% ($p < 0.05$).
Corrected: At 12-week follow-up, 66.7% of patients in the probiotic group and 41.9% in the placebo group showed a reduction in Psoriasis Area and Severity Index of **at least** 75% ($p < 0.05$).

Results:
…differences arose in 30 of 45 (66.7%) patients in the probiotic group and 18 of 43 41.9%) in the placebo group, showing a reduction in PASI up to 75% (*p*-value for the difference of proportions was 0.0317).
Corrected: …differences arose in 30 of 45 (66.7%) patients in the probiotic group and 18 of 43 41.9%) in the placebo group, showing a reduction in PASI of **at least** 75% (*p*-value for the difference of proportions was 0.0317).

Figure legend:
Fig. 2. Psoriasis Area and Severity Index (PASI)75 evolution. Point estimates with 95% exact confidence intervals of the proportion of patients with a reduction of PASI of up to 75% from baseline (PASI75) at each visit. *p*-values are obtained from Fisher's exact tests comparing the 2 proportions at each time-point.
Corrected: Fig. 2. Psoriasis Area and Severity Index (PASI)75 evolution. Point estimates with 95% exact confidence intervals of the proportion of patients with a reduction of PASI of **at least** 75% from baseline (PASI75) at each visit. *p*-values are obtained from Fisher's exact tests comparing the 2 proportions at each time-point.
