

## How is Your Skill to Judge a Diagnosis From a Photo?

Test yourself regarding the diagnoses in the photos below (generously supported by Professor Giuseppe Argenziano, Naples, Italy). Below is only 6 photos and it is just possible to make a choice of the diagnosis. At the website <http://www.medicaljournals.se/forum> you can log in and find these 6 and 24 more photos – all with options for diagnosis but also options for whether it is “atypical pigment network”, “blue-white structure” and “asymmetry”, or not. ENJOY!
