

A. Starter Module

B. Basic Module

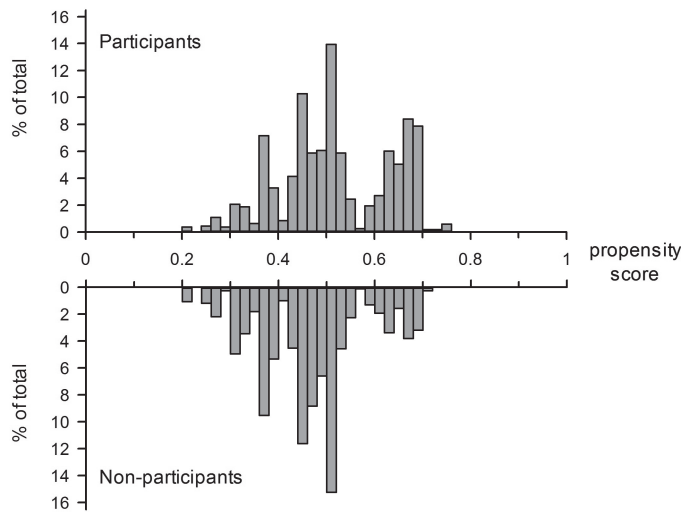

Fig. S1. Distribution of propensity scores for the Starter and the Basic module. This figure displays the propensity scores for the Starter and the Basic modules that were derived from the logistic regression models in Table II. Propensity scores for respondents and non-respondents showed similar distribution for the Starter Module, ranging from 0.37 to 0.85, and for the Basic module, ranging from 0.20 to 0.76.
